Name of file is Dockerfile (Casing is really important)

Simple Dockerfile

```
#Ubuntu based Hello World Container
# Has to be first instruction
FROM ubuntu:15.04
MAINTAINER shaik.khaja.ibrahim@live.in
RUN apt-get update
CMD ["echo", "helloworld"]
```

RUN Instructions
1. Used to run commands against our images that we're building

Building Image From Docker File

```
docker build -t <imagename>:<imageversion> .
```
